

AIA PESO ADVENTUROUS FUND

July 31, 2023

Fund Description

The AIA Peso Adventurous Fund (the "Fund") is a Philippine peso-denominated fund created for peso variable life insurance contracts issued by AIA Philippines Life and General Insurance Company Inc., (formerly The Philippine American Life and General Insurance Company). The Fund seeks to achieve long-term total return, which is a combination of capital growth and income with adventurous risk and at the same time minimize capital risk by investing in a portfolio of mostly equities and a small proportion of bonds. The Fund will invest in shares of Collective Investment Schemes established by AIA including Unit Investment Trust Funds (UITFs) that are managed by either AIA Investment Management and Trust Corporation Philippines (AIAIM PH) or reputable third-party investment managers.

Opinions: Any opinions expressed in this document may be subject to change without notice. We are not soliciting or recommending any action based on this material.

Risk Warning: Past performance is not indicative of future results. Our investment management services relate to a variety of investments, each of which can fluctuate in value.

The value of portfolios we manage may fall as well as rise, and the investor may not get back the full amount originally invested. The investment risk vary between different types of instruments. For example, for portfolios denominated in foreign currencies, changes in the rate of exchange may cause the value of investments, and consequently the value of the portfolio, to increase or decrease. In the case of a higher portfolio volatility, the realized loss upon redemption may be high, as the investment's value may decline substantially.

In making an investment decision, prospective investors must rely on their own examination of the merits and risks involved. Commentary:

Market Review

Macro Update

The lagged effects of monetary tightening seemed to have found its way to the Philippine economy as prices, demand and activity moderated. Headline inflation decelerated further for a fifth straight month to 5.4% y/y in June from 6.1% y/y the previous month, as food and transport prices eased. Factory activity slowed with S&P Global Philippines Manufacturing Purchasing Managers' Index (PMI) easing to 50.9 in June from 52.2 in May, reflecting softer rates of expansion across output and new orders. Trade deficit narrowed by 9.3% m/m to USD4.39 billion in May, representing a 21% y/y decline amid a moderate increase in exports and a decline in imports. The value of merchandise exports increased for the first time since November last year to USD6.44 billion (+1.9% y/y) in May led by electronic products. On the other hand, imports declined by 8.8% y/y to USD10.84 billion with all subsectors contracting, except for consumer imports. Meanwhile, the unemployment rate improved to 4.3% in May from 4.5% in April as the domestic economy remained open. In contrast, overseas cash remittances grew 2.8% y/y to USD2.49 billion in May, slower than 3.7% y/y growth in April and consensus estimate of 3.9% y/y increase for the month.

Bond Market Update

The local bond yield curve has steepened in July, normalizing from its previous inversion, on receding disinflation and recession risks. The 2-yr benchmark rate dropped by 9 bps to 6.23% while the 5-, 10-, and 20-yr increased by 11bps to 6.29%, 11bps to 6.41%, 39bps to 6.41%, respectively. The local bond market moved in tandem with US Treasury yields, which rose post Fed hike. The 25bp policy hike by the US Federal Reserve pressured local yields as interest rate differential between the Fed and the BSP narrowed to 75bps. Given uncertainty and rising yields, demanded for higher interest rates in the primary market. Because of this, the Bureau of Treasury (BTr) partially raised PHP108.39 billion of 9-, 15-, 6- and 7-year bonds in July, from its initial offering of PHP120 billion. The 9-Yr (FXTN 10-69) and 6-Yr (FXTN 7-68) bond re-offerings settled at a higher average yield of 6.562% and 6.299%, respectively. Meanwhile, while the newly issued 15-Yr (FXTN 15-01) and 7-Yr (FXTN 7-70) bond coupons were also set higher at 7.00% and 6.375%, respectively. The BTr supply schedule for August has been released maintaining its frequency for all T-bill and T-bond auctions. Bond tenors to be offered are 5-, 6-, 10-, and 15yrs.

Equity Market Update

The slowing US inflation print and PHP appreciation provided impetus for the PSEi to bounce its way back close to the 6,600 level in July. Ayala Land (ALI, +12.76%) was the darling across property names, as investors leveraged on the view of an easing monetary policy backdrop. BDO (+5.37%) and BPI (+5.24%) likewise supported the PSEi rally after reporting better-than-expected 2Q earnings. On the other hand, Universal Robina (URC, -10.84%) was the top index decliner for the month due to several issues that could potentially impact the company's earnings including the junk food tax, expanded sugar tax and single-use plastic tax. Foreigners remained net buyers for USD332m largely albeit average daily turnover fell sharply to USD87m, lower by 38% MoM.

Positioning, Outlook, and Strategy

Performance: The AIA Peso Adventurous Fund's return outperformed its benchmark by 35bps in July. The asset allocation for the month favored exposures to money market and long term bonds over equities. However, the fund's exposure in equities posted significant positive returns for the month, which more than offset the losses from fixed income. Disinflation bets and strong 2Q23 earnings from banks were the main drivers for the equities outperformance for the month.

Positioning, Outlook, and Strategy: We remain constructive on rates as the pace of tightening and inflation slows. Central bank policy's dependence on economic data and any threat to inflation expectations will keep asset prices volatile. We will continue to reduce exposure in equities as the economy slows and feel the impact of policy tightening.
